Fuel consumption is nominal and refers to specific weight 0,850kg/l. Sound subicitial rules refer to free field conditions: the installation site may influence the values. imensions, weights and other specifications contained in the technical data sheet and elated attachments are nominal, subject to tolerances and refer to the model with standard quipment; any optional and additional equipment/accessories can modify weight, imensions, performance. **P.R.P. Prime Power-Continuous power at variable load:** imensions, performance. **P.R.P. Prime Power-Continuous power at variable load**: he power that a genset can supply in continuous service at a variable load for an unlimited umber of hours per year while respecting the maintenance intervals established in the nvironmental conditions stated by the Manufacturer. according to ISO8528-1. The average ower supplied over time and any applicable overload must be less than the percentages tated by the Manufacturer. **E.P.** - **Emergency power**: This is the maximum power that a enerating set can deliver for a limited number of hours per year while complying with the naintenance frequency stipulated under the environmental conditions set by the lanufacturer. The number of hours per year is determined by the engine manufacturer. The verage power output over time must be lower than the percentages set by the engine nanufacturer. Overloading is not allowed.
